

Shakespeare AI: YouTube Presentation Script

Twelve 10s Google Flow Clips with Visual Prompts and Transition Directives

Global Consistency Style Seed (Include in every visual prompt):

Style: Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow, clean vector layout, modern sans-serif typography.

Clip 1: The Vision Hook (0:00 - 0:10)

Flow Prompt: Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. Place the uploaded static image layer [shakespeare_head.png] (Male Bard, on the left facing right) and [female_shakespeare.png] (Female Bard, on the right facing left) directly onto the canvas. Do NOT generate new face portraits; keep the original user-uploaded source images exactly as they are. Center the text 'Shakespeare AI: The Bard Talks' in clean white sans-serif typography.

Transitions: Enter: Instant start at 0:00 (no fade-in, no blank intro tiles) | Exit: Swipe left

Male Bard Welcome to Scholar Studio! We are bringing Shakespeare to life through modern scholarship...

Female Bard ...and bringing the Bard directly into current geopolitics, technology, and climate issues!

Clip 2: The Historical Warning (0:10 - 0:20)

Flow Prompt: Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. Centered glowing orange text overlay: 'We are doomed to repeat history unless we study how its patterns are here in the present.' The Male and Female Bards are positioned at the bottom corners, looking up toward the text.

Transitions: Enter: Slide in from right | Exit: Dissolve to black

Male Bard We are doomed to repeat history unless we study how its patterns repeat in the present.

Female Bard We find analogous situations in the very words and biography of the playwright himself.

Clip 3: The Problem (0:20 - 0:30)

Flow Prompt: Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. A glowing red warning card on screen showing three text bullet points: '1. Monolithic Model Drift 2. Security Vulnerabilities 3. Lifecycle & Testing Gaps'. The Male Bard stands on the left, gesturing toward the warning card.

Transitions: Enter: Fade in from black | Exit: Slide down

Male Bard Monolithic AI faces severe model drift, prompt hijacking, and session security leaks in production.

Female Bard The ADK and CLI solve this by enforcing structured agent schemas, isolated runs, and local validation tools.

Clip 4: Why Agents? (0:30 - 0:40)

Flow Prompt: Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. Three distinct glowing rounded-rectangle agent cards light up one by one: 'Corpus Agent', 'History Agent', and 'Advice Agent'. The Female Bard stands on the right, smiling.

Transitions: Enter: Slide up from bottom | Exit: Swipe left

Female Bard That's why we went agentic. Specialized subagents coordinate tasks, providing cognitive focus.

Male Bard No more monolithic model drift; each agent has strict instructions.

Clip 5: ADK Architecture (0:40 - 0:50)

Flow Prompt: *Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. A simplified glowing node diagram showing: 'Browser UI' -> arrow -> 'FastAPI Server' -> arrow -> 'ADK Workflow Runner'. The Male Bard is on the left pointing at the diagram.*

Transitions: *Enter: Slide in from right | Exit: Dissolve*

Male Bard The backend runs on the Agent Development Kit framework, routing queries through a central intent analyzer.

Female Bard It matches intents to specialized agents using Pydantic schemas.

Clip 6: Safety & Isolation (0:50 - 1:00)

Flow Prompt: *Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. On-screen graphics representing: a glowing green padlock shield labeled 'Security Guardrail' on the left, and an isolated log folder labeled 'X-Session-ID' on the right. The Female Bard is positioned in the center.*

Transitions: *Enter: Fade in | Exit: Zoom out*

Female Bard Security is baked in: unique session ID headers ensure isolated user logs to prevent session bleeding.

Male Bard And pre-flight guardrail agents block prompt injections before they execute.

Clip 7: Cache Refresher Loop (1:00 - 1:10)

Flow Prompt: *Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. An animated circular loop representing background caching, showing a timer countdown. Text overlay: 'Local Cache JSON File (Refreshed every 12 hours)'. The Male Bard stands on the left.*

Transitions: *Enter: Zoom in | Exit: Swipe up*

Male Bard A parallel cache loop refreshes stories every 12 hours to prevent Vertex API token drainage.

Female Bard This ensures the latest news is served directly from local cache JSON files.

Clip 8: The Mirror Companions (1:10 - 1:20)

Flow Prompt: *Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. The Male Bard and Female Bard sways and bounce in the center, facing each other. An overlay text reads: '(Max) Shakespeare (Headroom)'.*

Transitions: *Enter: Slide down from top | Exit: Dissolve*

Female Bard We even styled the UI with drifting, retro-cybernetic (Max) Shakespeare (Headroom) mirror companions.

Male Bard They bounce and sway to bring the UI to life!

Clip 9: Demo: Geopolitics (1:20 - 1:30)

Flow Prompt: *Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. A mockup screenshot of a news card showing: 'Headline: Modern Geopolitical Division' on the left, matched to a parchment card with a quote: 'Yond Cassius has a lean and hungry look...' on the right.*

Transitions: *Enter: Fade in | Exit: Swipe left*

Male Bard Look at this: current geopolitical headlines are automatically matched with quotes from Julius Caesar.

Female Bard The News Analysis Agent immediately writes the commentary.

Clip 10: Demo: Climate (1:30 - 1:40)

Flow Prompt: *Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. A mockup screenshot of an environmental news card: 'Climate Change & Disturbed Seasons' on the left, matched to a quote: 'The spring, the summer, the childing autumn...' on the right.*

Transitions: *Enter: Slide in from right | Exit: Swipe up*

Female Bard Climate change developments are paired with citations from A Midsummer Night's Dream.

Male Bard We are mapping the ecological theme directly to classical literature.

Clip 11: The Build & Antigravity (1:40 - 1:50)

Flow Prompt: *Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. A glowing screen display showing terminal logs: 'uv run pytest - 10 passed' and 'gcloud run deploy'. The Male Bard and Female Bard stand at the bottom corners looking at the screen.*

Transitions: *Enter: Slide up from bottom | Exit: Dissolve*

Male Bard We co-developed this alongside the Antigravity agent, running lint checks and automated unit tests.

Female Bard And deployed the final container directly to Google Cloud Run!

Clip 12: Outro & CTA (1:50 - 2:00)

Flow Prompt: *Minimalist digital studio backdrop, dark slate-gray background, soft ambient neon purple and cyan glow. The Male and Female Bards are in the center. A large glowing text overlay card reads: 'GitHub: floatytomato/ShakespeareSpeaks'.*

Transitions: *Enter: Fade in | Exit: Fade out to black*

Male Bard The prototype is fully open source. Clone the repo under floatytomato/ShakespeareSpeaks.

Female Bard Add your API key, and begin exploring. Link in the description!
